

My Career Evolution Plan

2025 - 2030+

🚀

My Aspirations

Fields: Aerospace & Quantum Computing

Goal: The intersection of Quantum Computing & AI for aerospace simulation, navigation, and materials science.

MARKET CONTEXT

- 📈 Quantum market: \$1.42B (2024) → **\$4.24B (2030)** [1]
- ✈️ Aerospace quantum: \$2.73B → **\$12.16B (2035)** [2]
- 🔧 Airbus & BMW Group: Fuel cell catalyst modeling [3]

🔥

My Core Drivers

💖

Enjoyment

Passion-driven work

🌐

Impact

Meaningful contribution

💰

Prosperity

Financial security

📈

The Market Context

Projected growth of the Quantum Computing Aerospace & Defense Market. [2]

💡

My Journey & Vision

For several years, I have been documenting the emergence of new technologies related to quantum physics. This idea of a field that could soon change our methods fascinates me.

I have a passion for quantum principles and believe that quantum computing could become a prerequisite for future engineers. Understanding it would be a significant advantage, as quantum computing will impact AI, security, communication, and computer simulation.

However, for now, this remains theoretical. Before it becomes reality, I am orienting myself toward my second passion: working in aerospace, which is also a rapidly evolving field and represents humanity's next frontier.

🗺️

My Roadmap

🎓 Self-Taught: Quantum, Math, Physics, AI, Cyber
